

Turdle Fencing

Installation Instructions

The T-Post Universal Detachable Length Extender is not just a part, it's a tool allowing the fencer many options. It features easy-to-use, solid steel construction, and requires no heavy equipment for installation. The Extender can be used on existing fencelines where open access or landscape restricts standard fencing practice. No welding necessary, the Extender installs in minutes, saving labor and cost, and is completely reusable. The Extender can be used to mitigate deer, elk and antelope, as a landscape reinforcement, debris fence, construction site safety fence, vineyard fence or gate support reinforcement. U.S. Patent Pending.

1. Place the T-Post Universal Detachable Length Extender over the top of the existing T-Post in your fenceline. The Extender must be clean and dry to ensure proper installation. Do not tighten the bolts at this point.
2. Insert the bottom of the extending T-Post into the remaining slot, parallel to the existing post. A minimum of 3 inches overlap of the two posts is suggested to ensure a stable extension.
3. Tighten the bolts simultaneously, using a 9/16" wrench for final adjustments. Fencing pliers and a small hammer may also be required for installation.

For questions or to order replacement parts for your T-Post Universal Detachable Length Extender, contact Turdle Fencing at hardwear@midrivers.com. Additional information can be found online at www.turdlefencing.com.
